How Aetna HealthSave plan costs and payments work

When you see a doctor, get lab tests, or fill a prescription, your Aetna HealthSave plan usually picks up some of the cost. Here's how to determine whether you'll need to pay for some of those expenses.

Note: The examples here are for the <u>Aetna HealthSave</u> medical plan, but the same concepts apply to the Aetna HealthSave Basic plan.

Tip

You pay nothing for in-network <u>preventive care</u>, which includes services like your annual checkup, routine OB/GYN or prostate exams, and well-child visits.

Deductible

Your annual deductible is the amount you pay for covered services and medications before your medical plan starts to pay. In-network preventive care expenses are not subject to the deductible and are fully paid by the plan.

Examples

Jim, 42 **Enrolled in Aetna** HealthSave and covers himself and his wife

Enrolled in Aetna HealthSave and only covers herself Annual individual deductible = \$1,700

Katie, 31

 His first medical expense of the year is for an MRI that costs \$300. He pays \$300. He keeps paying for any nonpreventive

Annual family deductible = \$3,400

- care charges until his out-of-pocket medical expenses add up to \$3,400. Once he meets his \$3,400 deductible, Jim
- pays 10% of any subsequent in-network nonpreventive care charges up to a cap of \$7,800 (the Aetna HealthSave plan out-of-pocket maximum). Even before Jim and Katie meet their deductibles, the amounts they pay for in-network care are

site. You can also pay with your personal card and reimburse yourself later from your HSA through the

Prescription drugs

With the Aetna HealthSave plan, you pay the full cost of most prescription medications until you meet your deductible.

Need to know

After you meet your deductible, you pay only the copay when you purchase your medication.

 You'll pay less for generic than for brand-name prescriptions. You'll save when you order a larger supply of a mail-order prescription.

See which preventive medicine prescriptions aren't subject to the deductible.

Q: Your nonpreventive prescription is \$350, with a \$45 copay.

How much do you pay?

Your copay varies based on two factors:

- A: It depends. • If you've met your deductible, you pay only the \$45 copay.
- If you haven't met your deductible, you pay the full \$350.

Tip

You save money when you purchase a generic instead of a brand-name drug. Ask your doctor if there is a generic drug that would work for you.
